

### 3.9 Module Mania

<http://www.websuburb.com.au/HelpDesk/Modules/StandardModules/tabid/462/Default.aspx>

#### 3.9.1 Standard Modules

A number of modules have been developed by the DotNetNuke team and are installed as standard in the website.

Hundreds of additional modules have been written by third party developers. Many of these are available for free download or at very reasonable prices. (NB! We have a number of customised modules on the WebSuburb site. If you need a module that is not installed you will need to request this by emailing [admin@websuburb.com.au](mailto:admin@websuburb.com.au)) Clicking the drop down list in the modules shortcut toolbar will display a list of all the modules available.

**Figure: Drop down list showing list of modules available**

Module	Description
Account Login	Enables registered users e.g. administrators and subscribers to log in to the site.
Announcements	Publish messages or notices
Banners	Advertising type images
Contacts	A customised list of organisation contacts
Discussions	A simplified forum. We suggest that you look at the custom forum on the website.
Documents	Displays a tabulated list of files (e.g. PDF documents) with additional information about the owner, size etc.
Events	A calendar or list display that is date controlled.
FAQ	Frequently Asked Questions. Displays only question headers and allow the user to click on a small icon to display the answer.
Feedback	An online form for users to send a message to the site administrator.
IFrame	Displays a page from another website within the page on your website. NB! Not compatible with early browsers.
Image	Displays an image located in the image gallery or another website.
Links	A tabular list of hyperlinks to a page, file or image on your website or another website. Can track the number of times the link is clicked by users.
News Feeds (RSS)	A module for displaying content from RSS (Really Simple Syndication) news feeds. i.e. similar to Reuters ticker
Search Input	A form for entering search keywords.
Search Results	A form for displaying results of a search on the site.
Survey	Enables users to vote for choices and view a chart of results.
Text/HTML	For adding mixed text and image content to the site.
User Account	Enable users to record or update their login or membership details.
User Defined Table	Enables you to create and store data in a table on the website. Includes basic functionality for sorting and ordering the data.
XML/XSL	Enables the administrator to create customised display using data in a XML file together with an XSL “style sheet” to format the data.

The next step in Session 3 under Standard Modules is Using Banners.
